BETA (0.1) - 15.01.2014

# Version 2.3

## **Upgrade Guide**

- 1. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 2. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

## **Improvements**

- 1. Added UniversalPoser so ou could use the same InteractionTargets with all our characters even if the have different bone orientations.
- 2. Added RecoilAction to Pla Maker integration.
- 3. Updated Read Pla er Me integration to version 1.13.2.
- 4. Added CCDStretch.cs (automatic stretch and squash for CCDIK).

## Version 2.2

## **Upgrade Guide**

- 3. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 4. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

## **Improvements**

- 5. Updated Read Pla er Me integration.
- 6. Converted demo materials to Standard shader so the could be used with other render pipelines.
- 7. Added FABRIKBendGoal.cs.
- 8. Added the VRIK Calibration (Mocap With Elbow Targets) demo.

- 1. InteractionS stem does not reset Poser Weight an more when starting a new interaction that doesn't use the Poser.
- 2. Fixed VRIK locomotion error with legless characters.
- 3. Fixed VRIK rotating the character around the wrong pivot point when Appl Root Motion disabled.

### Version 2.1

### **Upgrade Guide**

- 5. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 6. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

#### **Improvements**

- 9. Added Clip Settings to Baker, allowing ou to define AnimationClipSettings to the baked animation clips.
- 10. Added Shoulder Yaw Offset and Shoulder Pitch Offset to VRIK arm settings to make ou able to tweak shoulder rest angles.
- 11. Added headers to VRIK, ArmIK and LegIK for better readabilit and parameter grouping.
- 12. Added integration package for Read Pla er Me avatars VRIK Oculus calibration.
- 13. Added support for a head look-at target to Recoil.cs.
- 14. Added support for armless VRIK.
- 15. Added a new Animated locomotion module to VRIK.
- 16. Added the Movement Animset Pro (AS package from Kubold) integration package (VRIK animated locomotion).
- 17. Added the Use Animated Head Height Weight/Range/Blend parameters to VRIK spine to allow for more natural locomotion animation for 3rd person networked avatars b inheriting vertical head bob motion from the animation while head target height is close to head bone height.

- 4. Fixed TwistRelaxer not resetting to default localRotation with Fix Transforms enabled.
- 5. Fixed unanimated roll bones rolling when used b the TwistRelaxer.
- 6. Fixed broken BipedIK inspector in Unit 2020.
- 7. Fixed picking up InteractionObjects while interaction is paused.
- 8. Fixed RotationLimitPol gonal and RotationLimitSpline Scene View tools being partiall not visible in Unit 2019 and later.
- 9. Fixed VRIK leg stretching not working without foot targets.

- 10. Fixed InteractionS stem running at different speeds with AnimatePh sics update mode.
- 11. Fixed a bug causing HitReaction to twitch when hitting the head of a moving character.

## Version 2.0 - 16.10.20

## **Upgrade Guide**

- 7. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 8. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinallK/\_Integration .
- 9. TwistRelaxer.cs was restructured to support multiple relaxers on the same bod part and TwistRelaxer components need to be set up again, sorr for the inconvenience! Find the TiwstRelaxer, add in one or more TwistSolvers, assign the Transforms, set weight to 1 and Parent Child Crossfade to 0.5 to get the previous default behaviour. If ou wish to use multiple solvers, add them into the arra in inverse hierarchical order children first.

### **Improvements**

- 18. Added VRIKCalibrator.CalibrateHead() and CalibrateHands() to make it easier to calibrate avatars with arbitrar bone orientations.
- 19. Added VRIKCalibrationBasic.cs and VRIK (Simple Head & Hands Calibration) demo to show an easier wa to calibrate VRIK for the most common head & hands VR case.
- 20. Added support for additional AimIK pass for the head to FPSAiming.cs to support look-at while aimWeight less than 1.
- 21. Added default pose and Start/Stop Solver buttons to EditorIK, improving it's reliabilit and usabilit . Fixed EditorIK not working with LookAtIK.
- 22. Added letting go with one hand functionalit to PickUp2Handed.cs (InteractionS stem).
- 23. TwistRelaxer.cs was restructured to support multiple relaxers on the same bod part. See Upgrade Guide for more information.
- 24. Added VRIK PUN demo ( Integration folder).
- 25. Added VRIK PUN2 demo (Integration folder).
- 26. Added GetYaw(), GetPitch() and GetBank() methods to V3Tools.cs and QuaTools.cs.
- 27. Added Smooth Damp Time to AimController.cs. This can be used as an alternative target direction interpolation method (disabled b default) to interpolate aw, pitch and magnitude separatel instead of spherical interpolation that can cause unwanted results sometimes.
- 28. Added Max Bod Y Offset to VRIK Locomotion settings. Reducing this value reduces head bob from locomotion.
- 29. Updated SteamVR integration package to v2.6.1.
- 30. Added Three DOF rotation mode to InteractionTarget to allow objects to be picked up from an angle.

- 31. Added the scale parameter to VRIK to make it work consistent with small or large scale characters.
- 32. Added VRIK.solver.locomotion.Relax() to force VRIK to take two footsteps to realign to a more neutral position when standing.
- 33. Added CCDBendGoal.cs. Add this to a GameObject ou wish CCD to bend towards.

- 12. Fixed a bug with Grounding.lowerPelvisWeight in some cases lifting the pelvis and liftPelvisWeight lowering it.
- 13. Fixed Baker IK position/rotation baking for Animators that have parent gameobjects.
- 14. Fixed Baker not updating clip length when overwriting a file.
- 15. Fixed GrounderBipedIK spine rolling when Animator was disabled.
- 16. Added Quer TriggerInteraction.lgnore to all Grounder ra casts.
- 17. Fixed VS warnings about redundant Seriali eField attributes.
- 18. Fixed InteractionObject.cs not using CompareTag.
- 19. Fixed hands lagging behind when a moving pla er picked up an object with the Interaction S stem.
- 20. Fixed VRIK not rotating the pelvis correctl when Pelvis Target set and Pelvis Rotation Weight set to 1.
- 21. Simplified and optimi ed RotationLimitHinge calculations.
- 22. Fixed InteractionEffector NullReferenceException when using Enter Pla Mode Options.
- 23. Fixed Grounding.isGrounded alwa s returning true. Fixed GrounderIK rotating the root while not grounded.
- 24. Fixed FingerRig solution dependence on hand rotation.
- 25. Fixed VRIK rotating the upper arm bone even if arm Position/Rotation Weight is 0.

## Version 1.9

### **Upgrade Guide**

- 10. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 11. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .
- 12. Dropped support for Unit 5.x (not supported b Asset Store an more). Min supported Unit version now is 2017.4.28f LTS. If ou need a Unit 5.x compatible version, please contact developer.

### **Improvements**

- 34. Improved VRIK master weight blending.
- 35. Added BendGoalWeight to InteractionObject.
- 36. Added LOD and VRIKLODController.cs to VRIK. Setting LOD level to 1 saves approximatel 20% of solving time. LOD level 2 means IK is culled, with onl root position and rotation updated if locomotion enabled.
- 37. Added Root Heading Offset to VRIK Spine settings. Enables ou to change the angle of the root relative to the HMD to turn the avatar sidewa s if ou d like to have an angled stance for example when holding a rifle or boxing.
- 38. Added SetFootPosition() to GroundingLeg.cs. Enables ou to override the animated position of the foot and therefore use the single pass of IK alread used b the Grounder to offset or plant a foot to a world space position together with the grounding effect.
- 39. Changed MechSpiderLeg.cs to keep the feet rotated relative to ground normal.
- 40. Added RotationLimit.SetDefaultLocalRotation(Quaternion localRotation) to allow ou to define limit default local rotation b script.
- 41. Updated Oculus integration package to v1.37.
- 42. Updated SteamVR integration package to v2.2.0.
- 43. Added EditorIK.cs to update an IK component in Editor mode.
- 44. Added baseForwardOffsetEuler to the e es of LookAtIK so clamping base direction could be adjusted for irregularl shaped e es.
- 45. Updated UMA integration package to v 2.8.1.
- 46. Added the Baker, a powerful new tool for baking IK to Humanoid, Generic and Legac animation clips.
- 47. Added AimlK, FBBIK and LimbIK demos for the Baker.

- 26. Fixed Grounder's Overstep Fall Down functionalit in Unit 2018, where ra casts starting from inside colliders return Vector3. ero as hit point.
- 27. Fixed a bug in VRIKCalibrator that did not allow to calibrate without a pelvis target.
- 28. Fixed arm localPosition warping when blending in/out of of VRIK weight.
- 29. Fixed GrounderIK twitching with AnimatePh sics update mode.
- 30. Fixed VRIK pelvis rotating to Pelvis Target if it assigned, but Pelvis Rotation Weight ero.
- 31. Fixed FingerRig solution dependence on hand rotation.
- 32. Fixed IKSolverTrigonometric/IKSolverLimb failing when solved on extremel small rigs.
- 33. Fixed VRIK arm solver elbow twisting out of hinge limit.
- 34. Fixed bugs in IKSolverLookAt.GetPoints() and IKSolverFullBod .GetPoints().
- 35. Removed all warnings generated b Final IK scripts in Unit 2018.3.
- 36. Moved InteractionObject initiation from Awake to Start to allow creating them in runtime.
- 37. Fixed VRIK thigh and calf twist rotation for characters that have no toe bones.
- 38. Fixed RotationLimit scene view tools not showing up in Unit 2018 versions.
- 39. Stopped VRIK locomotion from taking repeated steps to the same position.

## Version 1.8 - 25.10.18

## **Upgrade Guide**

- 13. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 14. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

### **Improvements**

- 48. Added scaleMlp to VRIKCalibrator. Settings to enable ou to make adjustments to character scale.
- 49. Added LookAtController.cs and LookAt Controller demo scene. LookAtController is a tool for LookAtIK that easil takes care of problems like smoothing weight, smooth switching between multiple targets, smooth turning towards the target and root rotation.
- 50. Added an error log to VRIK that prevents it from updating when the character scale is ero and producing NaN errors.
- 51. Demo character can double-jump now.
- 52. VRIK leg solver does not sample the animation each frame to find the bend plane an more as it has proven to be unreliable. Instead ou'll get a "Bend To Target Weight" for the legs. You can use it to keep the bending plane locked to the hips (value of 0) or to the rotation of the foot (value of 1) or an thing in between.
- 53. Added legLengthMlp to VRIK, enables ou to configure default leg length.
- 54. Added stretchCurve to VRIK's legs for automatic and smooth stretching.
- 55. Added Aim Offset to FPSAiming.cs, that enables ou to adjust the normal aiming angle in the First Person Shooter demos.
- 56. Added Shoulder Twist Weight to VRIK arm settings, the weight of twisting the shoulders back when arms are lifted up.
- 57. Added a new offset modifier and demo for FBBIK Penetration Avoidance, that can be used to keep the hands and feet from penetrating scene geometr when the character has a ver slim character collider.
- 58. Added a new component ArmIK, which enables ou to use VRIK's arm solver independentl .
- 59. TwistRelaxer has public Parent and Child fields now, so it can be used on forearm roll bones that are not parents of the hand bone. Will be automaticall assigned if left empt.
- 60. Added VRIKPlatformController.cs and the VRIK (Moving Platform Controller) demo, that enables ou to easil move our VRIK character from platform to platform.
- 61. VRIK supports legless characters now.

- 62. VRIKCalibrator returns CalibrationData now, that can be used to calibrate the same character in another scene exactl the same wa .
- 63. Improved VRIK stabilit with prone/supine poses.
- 64. Added OverstepFallsDown to to Grounding solver. Disabling it keeps the foot that is over a ledge at the root level.
- 65. Added the first multithreaded AnimationJob versions of Final IK solvers: CCDIKJ and AimIKJ. Requires Unit version min 2018.2.4.

- 40. Fixed avatar height changing when recalibrating VRIK.
- 41. Fixed a NullReferenceException in IKSolverVRArm.cs when VRIK was added in runtime.
- 42. Changed Update to LateUpdate in VRIKPlatform.cs to support Mecanim-animated platforms.
- 43. Added FingerRig.StoreDefaultLocalState() to update the default pose used b Fix Transforms.
- 44. Made it possible to manuall update HandPoser and GenericPoser b calling poser.UpdateManual();
- 45. Fixed VRIK Shoulder Weight blending issue in Yaw Pitch mode.
- 46. Fixed a bug in VRIK that moved the head off target when Pelvis Position Weight was between 0 and 1.
- 47. Fixed a bug with calling FBBIK solver.SetLimbOrientations before FBBIK has initiated.
- 48. Fixed a bug with unnatural VRIK spine bending when using la ing down or other non-vertical animations.
- 49. Fixed a bug with unstable hip rotation with some characters using VRIK.
- 50. Fixed a bug with VRIKCalibrator scale when character root Y was not 0.
- 51. Fixed ph sics interpolation issues caused b GrounderQuadruped's and GrounderIK's root rotation in Unit 2017.x versions.
- 52. Fixed errors with VRIK used on shoulderless characters.
- 53. Fixed InteractionS stem not working when FBBIK was updated manuall .
- 54. Fixed VRIKCalibrator failing to calibrate the head right if the character was rotated at the time of calibration.
- 55. VRIK locomotion footstep rotations will not get messed up when ik.solver.Reset() called in the middle of walking animation.
- 56. Grounders will not ra cast against trigger colliders.

## Version 1.7 - 17.01.18

## **Upgrade Guide**

- 1. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 2. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

### **Improvements**

- 1. Simplified the Aim Swing demo, added AimSwing.cs.
- 2. Humanoid Third Person controller is able to turn on spot while in Strafe mode.
- 3. Made MotionAbsorb an OffsetModifier, will enable ou to set it s mode to PositionOffset, in which it will use effector.positionOffset and enable ou to keep using effector position and rotation to override whatever it is doing or use it seamlessl with the InteractionS stem.
- 4. TwistRelaxer will work now also if the hand bone is not parented to the twist bone.
- 5. Added Twist Angle Offset to TwistRelaxer, can be used to adjust the default twist rotation of the bone it is used on.
- 6. Added the VRIK LeapMotion integration package.
- 7. Added spineTargetOffset to IKSolverLookAt.cs. Can be used to make the chest look at a different target position.
- 8. Added VRIKCalibrator.cs and the VRIK (Calibration) demo scene. Enables ou to more easil set up VRIK with up to 6 trackers.
- 9. Added Unit Event implementation to interaction events.
- 10. Added rotationWeight to FingerRig s fingers.
- 11. Added Rotation DOF to FingerRig s fingers, can be used to set rotational degrees of freedom to 1 for the fingers to enable rotation around a single axis instead of all 3.
- 12. Added armLengthMlp to VRIK, enables ou to configure default arm length.
- 13. Added stretchCurve to VRIK's arms for automatic and smooth stretching.
- 14. Added Move Bod Back When Crouching to VRIK's spine settings. Enables ou to better adjust the crouching pose.
- 15. Added Rotate Chest B Hands to VRIKs spine settings. Defines the amount of rotation applied to the chest based on hand positions.
- 16. The spine bends more naturall now, especiall when Maintain Pelvis Position is set to a higher value.
- 17. Added blocking functionalit to CameraController.cs.

- 18. Added AimController.cs a new tool for AimIK that easil takes care of problems like smoothing weight, smooth switching between multiple targets, smooth turning towards the target, root rotation and using recoil/reload animations with AimIK.
- 19. Added the VRIK (Hit Reaction) demo that uses HitReactionVRIK for procedural hit reactions.

- 1. Fixed a Null Reference Exception when adding FBBIKHeadEffector in runtime.
- 2. Fixed a bug with the blending of VRIK Bend Goal Weight.
- 3. Fixed a bug with the InteractionS stem not resetting effectors right when another interaction was called before the effectors were full reset.
- 4. Fixed a bug with FABRIK bones drifting apart after a while when Fix Transforms disabled and rotation limits used.
- 5. Fixed a bug with VRIK arm bend goal accurac .
- 6. Fixed a bug with VRIK Max Root Angle locked to 25.
- 7. Fixed a bug with using VRIK leg bend goals messing up leg solver results.
- 8. Fixed a bug with InteractionS stem LookAt not working smoothl with AnimatePh sics Animator update mode.
- 9. Fixed a bug with VRIK producing different results when rotated upside down.
- 10. InteractionS stem will update it s effectors directl before FBBIK update instead of LateUpdate so it alwa s has the latest transformations to work with even if other IK has been solved before FBBIK.
- 11. Fixed the demo character controller rotation bug in Unit 2017.2.

## Version 1.6.1 - 11.04.2017

## **Upgrade Guide**

- 1. MAKE A BACKUP! Open a new scene, delete Plugins/RootMotion and reimport. Also reimport PuppetMaster if ou had that in our project.
- 2. If ou were using an of the integration packages, reimport them from Plugins/RootMotion/FinalIK/\_Integration .

#### **Improvements**

- 1. Added a target slot to BipedIK's Pelvis.
- 2. Added Chest Goal and Chest Goal Weight to VRIK. Used for turning the chest towards a world space position.
- 3. VRIK chest rotation offset will not be weighed down b Chest Rotation Weight an more.
- 4. CharacterControllerThirdPerson will not slide down on slopes an more.

#### **Fixes**

- Safeguarded Grounder from a <u>CapsuleCast bug</u> in Unit that might cause it to return NaN for hit.point when cast against large colliders. This used to cause Invalid IKEffector.positionOffset (contains NaN)! errors in IKEffector.cs.
- 2. Fixed editor script obsolete API warnings in Unit 5.6.

## Changes

1. VRIK Chest Rotation Weight renamed to Neck Stiffness.

# Version 1.6 - 07.03.2017

## **Improvements**

- 1. Added footstep events to VRIK locomotion.
- 2. Added VRIK support to the Leap Motion integration package.
- 3. Added a scene with VRIK set up for Oculus Rift (Assets/Plugins/RootMotion/FinalIK/\_Integration/Oculus.unit package).
- Added a scene with VRIK set up for Steam VR
   (Assets/Plugins/RootMotion/FinalIK/\_Integration/Steam VR.unit\_package).
- 5. Added the VRIK (Moving Platform) demo scene to help with VR characters set up on moving objects.
- 6. Added the VRIK (Twist Relaxers) demo scene to help with updating twist bones after VRIK has solved.
- 7. Added Min Head Height to VRIK spine settings. The head of the avatar will not be lowered past that even if the pla er is I ing down on the ground.
- 8. VRIK can now work with an root rotation, meaning ou can use it on walls,

toelatates twist footstep

while

- 7. IKExecutionOrder will not ignore Fix Transforms and will work with Animate Ph sics update mode.
- 8. RotationLimit will not set default orientation in Awake if SetDefaultLocalRotation() has been called.
- 9. Fixed a NullReferenceException when adding FBBIKHeadEffector in runtime.
- 10. Fixed a bug with VRIK that did not blend shoulderRotationWeight properl if arm position weight was less than 1.
- 11. Fixed a bug with FBBIK limb mapping accurac .
- 12. No more Arra out of range error when calling VRIK.solver.Reset before the solver has initiated.
- 13. Fixed a VRIK spine twitch when working with super-human si ed characters.
- 14. Fixed a bug with TwistRelaxer moving the hand awa from it's position when the twist bone was not aligned orthogonall to the arm.

# Changes

- 1. Removed obsolete virtual realit demos and assets. Use this link if ou still need them for reference.
- 2. Added relaxLegTwistMinAngle and relaxLegTwistSpeed to VRIK locomotion. Set relaxLegTwistSpeed to 0 to maintain FIK 1.5 behaviour.
- 3. Renamed VRIK (Beta) demo scene to VRIK (Basic) .
- 4. Updated minimum supported Unit version to 5.3.6f1.
- 5. Moved Plugins/Editor/RootMotion to Plugins/RootMotion/Editor.

## Version 1.5 - 13.10.2016

## **Improvements**

- 1. Added the Two Handed Prop demo scene and script.
- 2. Added the Third Person Shooter (Recoil) demo scene, update AnimatorController3rdPersonIK.cs to support Recoil.
- 3. Added a Hands Pull Bod toggle to FBBIKHeadEffector. Disabling it will give full priorit to the head effector and the hands will not be able to pull the head awa. Also, disabling it will significant improve the performance.
- 4. Added VRIK (Beta), a new full bod solver designed specificall for contemporar VR requirements in inverse kinematics.

#### **Fixes**

- 1. Fixed a bug that broke LookAtIK when the bones assigned to it were removed and other bones assigned.
- 2. Extended Posers from SolverManager, which will make them work properl with AnimatePh sics.
- 3. Added Aim IK Solved Last toggle to Recoil.cs, which will enable the procedure to be used if AimIK is solved after FBBIK.

## Changes

1. Removed Time Step from all solvers.

## Version 1.4 - 15.06.2016

## **Improvements**

- 1. Added LeapMotion (Orion) integration package to Plugins/RootMotion/FinalIK/ Integrations.
- 2. Made FPSAiming work with Recoil, added the First Person Shooter (Recoil) demo scene
- 3. Added the Head Effector (Hand Controllers) demo scene.
- 4. Added TwistRelaxer.cs, a tool for relaxing twist bones after solving IK.

- 1. Fixed Grounders moving the feet of the characters to Vector3. ero in the first frame.
- GrounderQuadruped can now be used on a spherical planet. Update
   GrounderQuadruped.gravit to alwa s point towards the center of the planet. The
   magnitude of the vector is irrelevant.
- 3. Fixed a bug with the CharacterThirdPerson that enabled jumping in air when the ground was too far.
- 4. Aded public bool TriggerInteraction(int index, bool interrupt, out InteractionObject interactionObject) and public bool TriggerInteraction(int index, bool interrupt, out InteractionTarget interactionTarget) to InteractionS stem as an eas wa to retrieve InteractionObjects/Targets when triggering interactions.
- 5. Fixed some bugs with GrounderQuadruped root rotation.
- 6. Fixed a bug with FBBIKHeadEffector ignoring bod, thigh and shoulder effector positionOffsets.
- 7. CharacterThirdPerson.cs now supports arbitrar gravit.

## Version 1.3

## **Improvements**

- 1. Simplified FBIKBoxing.cs script.
- 2. HeadEffector will use FBBIK.fixTransforms, meaning ou will be able to use it with unanimated characters.
- 3. Rotation Limits now support multiple object editing.
- 4. Added the Pla maker actions to Plugins/RootMotion/FinallK/\_Integration as a unit package. Double-click to import the actions when ou have Pla maker alread imported.
- 5. Added a seated example to the Head Effector demo.

#### **Fixes**

- 1. You can now easil move the root to where the ragdoll is before getting up, when using the RagdollUtilit . See the RagdollUtilit Demo.cs script.
- 2. InteractionS stem will not change an FBBIK settings that not used b the InteractionObject.
- 3. FBBIKHeadEffector now accounts for FBBIK solver weight and can be blended out correctl
- 4. LimblK.avatarlKGoal can now be changed after the solver has initiated.
- 5. Removed tooltips from arra s in InteractionObject and the Grounders. A bug in Unit causes tooltipped arra s to fail the Editor sometimes.
- 6. Fixed a bug that didn't initiate the IK solver when the IK component was disabled in Awake.
- 7. FixTransforms will not be applied when solver weight <= 0f.
- 8. InteractionS stem will ignore InteractionTriggers that are disabled or deactivated.
- 9. Renamed InteractionS stem.collider and InteractionS stem.camera to get rid of new ke word warnings when building projects.
- 10. Changing InteractionObject curve lengths will now update interaction length as expected.

# Changes

1. ShoulderRotator.cs moved to RootMotion.FinalIK namespace.

## Version 1.2 - 11.11.2015

## Learning

1. All components are now using the HelpURL attribute so ou can get to the best learning resource b clicking on the help button of each component.

### **Improvements**

- 1. HandPoser and GenericPoser now have a Fix Transforms option like the IK components. That will help with doing interactions with unanimated characters.
- 2. MechSpider can now be easil scaled b changing the MechSpider.scale value.
- 3. CharacterThirdPerson now also rotates the character around the Y axis with moving platforms and transfers root rotation to the controller.
- 4. Reduced package si e b 20%, improving downloading and importing times.
- 5. Made Final-IK compatible with PuppetMaster.

- 1. Fixed empt warning when adding FBBIK in runtime.
- 2. InteractionS stem LookAt function continue looking at objects when the interaction is paused.
- 3. Fixed a bug with FABRIKRoot not considering FABRIK chain targets.
- 4. Fixed error message when adding GrounderFBBIK.
- 5. Fixed RotationLimitSpline Scene View tool.
- 6. Removed warnings in Unit 5.3.

## Version 1.1 - 14.09.2015

## Changes

- 1. IK.Disable() is deprecated. Use enabled = false instead.
- 2. Moved AimPoser, Amplifier, Bod Tilt, HitReaction, Inertia, OffsetModifier, OffsetPose and Recoil to the RootMotion.FinalIK namespace.
- 3. Converted folder structure to:

Main Contents: Assets/Plugins/RootMotion/...
Editor Scripts: Assets/Plugins/Editor/RootMotion/...

This will make Final IK available for all compilation passes/languages, speed up compilation times and make it easier for other Asset Store developers to create compatible tools.

### **FullBodyBipedIK**

- 1. FBBIK solver now survives assemble reload and can be updated in editor mode.
- 2. Fixed blending solver weight when using bend goals.
- Added public bool ReferencesError(ref string errorMessage) and public bool ReferencesWarning(ref string warningMessage) so ou can check if the FBBIK references are OK from our own scripts.
- 4. Fixed RagdollUtilit for Unit 5.2 (worked around a 5.2 Mecanim bug)

#### VR

- 1. VR demos now check if Virtual Realit Supported is enabled in the Pla er Settings to avoid confusion.
- Renamed OculusSetup to VRSetup and script names containing OVR to VR to get rid of device discrimination.

#### Grounder

- 1. Fixed a bug with GrounderFBBIK that created problems when updating FBBIK manuall in FixedUpdate.
- 2. Fixed a bug with the Third Person Humanoid Animator Controller that appeared when jumping up from idle animation.

3. Added Grounder.Reset() that enables ou to teleport a grounded character without problems.

#### **Demos**

- 1. Fixed joint ranges of the ragdolls in Mapping To Ragdoll and Ragdoll Utilit .
- 2. Fixed a bug in MechSpiderLeg.cs that might have set footsteps to wrong height.
- 3. MechSpider.cs Min Height parameter works as expected now.

#### Common

1. Added video tutorial links to the context menu of FullBod BipedIK, AimIK and InteractionS stem components (others coming).

#### Editor

1. Reviewed the warning s stem. Solver setup warnings will be displa ed in a warning box in the Inspector, no more What s wrong? button logging in the console.

## Version 1.0 - 25.06.2015

## **Interaction System**

- 1. Fixed a bug with picking up objects, where the were parented with a random offset.
- 2. When the InteractionObject is destro ed in the middle of interaction, will smoothle reset the interacting effectors to defaults.
- 3. Fixed a bug with the InteractionS stem.speed value, it can now be used without problems when pausing/picking up objects.

#### Demos

- 1. Restructured the 3rdPersionDumm demo. Made it use a simple upper-bod aiming pose instead of 2 wasteful FBBIK passes.
- 2. Restructured CharacterThirdPerson, made the character controllers in the Grounder demo smoother and more responsive.
- 3. Removed CharacterControllerSimpleAim.cs (it is not needed an more as IK solvers have Target properties).
- 4. Added the Ragdoll Utilit demo scene.
- 5. Improved the Mapping To Ragdoll demo scripts to support smoothl blending in and out of the mapping.
- 6. Converted the Aim Weapon demo to Mecanim.
- 7. Deleted Carr BoxDemo.cs, just assigned the hand IK targets to the effector target slots.
- 8. Added CCD IK 2D and FABRIK 2D demo scenes.
- 9. Added the Finger Rig demo scene.
- 10. Converted the Hit Reaction demo to Mecanim.
- 11. Converted the Full Bod FPS demo to Mecanim.
- 12. Converted all Viking demos to Humanoid.
- 13. Removed Generic Dumm and his animations and Animator Controllers, all using Humanoid now.
- 14. Cleaned up man unused demo assets, reducing considerable the sile of the package and import time.
- 15. Renamed most of the demo assets for better readabilit and consistenc .
- 16. Removed the old and ver confusing Legac -based demo character controllers (CharacterControllerBase.cs, CharacterControllerDefault.cs, CharacterControllerLegac .cs, CharacterAnimationSimpleLegac .cs). Replaced them all with SimpleLocomotion.cs that works on Mecanim.

#### **2D**

 Added a 2D toggle to all Heuristic solvers (CCD, Aim, FABRIK). If toggled, the chains will be solved onl on the XY plane, meaning bones will be rotated around the Z axis onl.

## Finger Rig

 Created the FingerRig component. Add it to the hand GameObject, fill in the Fingers (or right-click on the component header and have them automaticall detected). See the Finger Rig demo scene.

#### VR

1. Updated all FinalIK VR Demos and scripts to Unit 5.1, merged the external VR package into the main project.

# FullBodyBipedIK

- 1. Auto-detecting bone references for Humanoid characters is more reliable (using Animator.GetBoneTransform()).
- 2. Fixed a bug with FBBIKHeadEffector, that did not disable it s behaviour when the component was deactivated or disabled.
- 3. Fixed ShoulderRotator.cs to account for FBBIK solver weight.
- 4. Fixed a bug with limb mapping, where the right shoulder was dislocated under extreme solver stress.
- 5. FBBIKHeadEffector.cs can now be added in runtime without errors.

#### Common

- 1. Added RagdollUtilit .cs that can be used to smooth! blend a character between animated and ragdoll modes. It also enables ou to appl IK to make kinematic adjustments on a ragdoll pose (see the Ragdoll Utilit demo scene).
- 2. Moved some demo assets (that will be also used in other packages in the future) to RootMotion/Shared Demo Assets.
- 3. Moved HandPoser.cs, GenericPoser.cs, IKExecutionOrder.cs to the RootMotion.FinalIK namespace.

### **Upgrade Guide**

- 1. Backup your project before upgrading!
- 2. Open a new empty scene, remove the existing RootMotion folder, reimport from the Asset Store.
- 3. Namespace RootMotion.FinalIK.Demos was renamed to RootMotion.Demos to support sharing demo scripts with other RootMotion packages in the future. You will have to replace using RootMotion.FinalIK.Demos; with using RootMotion.Demos in our own scripts if ou are referring to an of the demo scripts.

## Version 0.5 - 24.02.2015

### **FullBodyBipedIK**

- 1. Added the FBBIKHeadEffector script and the Head Effector demo scene
- 2. Added the Soccer Kick demo scene
- 3. Added the Recoil demo scene and scripts
- 4. Added the AnimationWarping script. This enables ou to warp an effector from animation space to world space (see the Soccer Kick demo).

### Interaction System

 Restructured InteractionTrigger. Each trigger can now specife the ranges for both character position and camera position for triggering interactions. This is most useful for VR and first person rigs.

#### OVR

1. Made a separate package containing OVR demos and helpful scripts about full bod mapping to the head controller, aiming and interactions.

#### Documentation

1. Added Search to the Script Reference.

#### Common

- 1. Moved all Editor scripts to RootMotion/FinalIK/Editor and RootMotion/Editor folders to make things easier for Javascript users
- 2. Added tooltips to the Interaction S stem and Grounder components and reusable demo scripts
- 3. Removed or made unique all conflicting assets from Unit s Sample Assets package
- 4. Restructured character controller scripts in the Grounder demo
- 5. Fixed a bug with MechSpiderLeg.cs

6. Removed sk boxes to reduce si e of package

# **Upgrade Guide**

- 1. Backup your project before upgrading!
- 2. Open a new empty scene, remove the existing RootMotion folder, reimport from the Asset Store.
- 3. All InteractionTriggers will be broken because of restructuring and have to be filled in again. Unfortunatel this was unavoidable.

# Version 0.41 - 22.09.2014

# FullBodyBipedIK

- 1. Redesigned the Hit Reaction component and demo scene
- 2. Fixed a bug that did not allow for scaling characters after the had been initiated

## AimlK

- 1. Fixed a bug with the solver that alwa s used Vector3.forward as the Pole Axis
- 2. Added the AimIK Pole demo scene

## Version 0.4 - 07.08.2014

#### AimlK

- 1. Fixed error when Clamp Weight was 1
- 2. Added polePosition, poleWeight and poleTarget to the solver. This enables us to keep another axis of the Aim Transform oriented at a position in world space

### **FullBodyBipedIK**

- 1. About 20% performance improvement
- 2. Fixed initiation error when manuall setting up the bone references in the Editor
- 3. Improved bend direction stabili ation
- 4. Added FBIKChain.push and FBIKChain pushParent
- 5. New custom editor
- 6. FBBIK iterations can be now set to 0. In that case, full bod effect is disabled and onl trigonometric passes will be calculated.
- 7. Added effector target transforms. You can now assign them in the Editor or write ik.leftHandEffector.target = transform. FBBIK will automaticall set effector position and rotation to match the target transform s. It will overwrite IKEffector.position = something.
- 8. Added the Full Bod FPS demo scene and scripts
- 9. Added the Pendulum demo scene to demonstrate how a character could be mapped to a ghost ragdoll with FBBIK

## Interaction System

- 1. InteractionObject now also works with Legac
- 2. Icons for all Interaction S stem components
- 3. Added Push and PushParent to InteractionObject weight curve t pes
- 4. All InteractionS stem methods now return a bool value notif ing if the operation was actuall carried out or not. So if StartInteraction() returns false, the interaction did not start (ma be because the effector was alread in interaction).
- Integrated InteractionLookAt to IntegrationS stem to reduce the number of components.All used InteractionLookAt components need to be removed, Unit will give a warning if it finds an .
- 6. Added InteractionObject.WeightCurve.T pe.PoserWeight. That will be used to determine weight of the hand posers.
- 7. Added picking up spherical objects to the Interaction PickUp2Handed demo
- 8. Restructured InteractionObject to add events that are easier to understand.

#### Common

- 1. Added IKExecutionOrder for eas editing of the order in which the IK components update their solvers.
- 2. All components of Final IK now have User Manual and Script Reference buttons in their context menu.
- 3. All component custom inspectors have a warning box now to inform ou of invalid/incomplete setups without spamming the console.
- 4. Man bugfixes for custom inspectors
- 5. Revised component menu structure
- 6. Improved scene view handle and button scaling
- 7. Added range sliders to inspectors
- 8. Fixed the bug with IK components that found the wrong Animator/Animation component from the character hierarch to get the Animate Ph sics value from
- 9. Improved the MechSpider demo, the spider is now capable of climbing vertical surfaces

#### LimbIK

- Changed IKRotation to match the orientation of the last bone, like FBBIK effectorRotation
- 2. SetBendGoalPosition now takes a weight parameter.
- 3. Added the Goal bend modifier that allows ou to assign a bend goal Transform.

#### Grounder

- 1. Small fixes, Grounder components can be added in runtime without errors
- 2. Added lowerPelvisWeight and liftPelvisWeight to the Grounding solver
- 3. Added hori ontal wall running to the demo scene
- 4. Enabled strafing for the biped character controller in the demo scene (switch Move Mode to Strafe)
- 5. Added OnPreGrounder and OnPostGrounder delegates to the Grounder components

### **BipedIK**

Simplified Pelvis constraints. Instead of bipedIK.solvers.pelvis.positionConstraint.position
ou can now use bipedIK.solvers.pelvis.position. Same with positionWeight,
positionOffset, rotation, rotationWeight and rotationOffset.

#### **FABRIK**

- 1. 2-3 times faster constrained FABRIK chains.
- 2. Removed IKSolverFABRIK.updateBoneLengths. It will alwa s update bone lengths and axes now, making it possible to skip animated bones in the hierarch.

## Third Party Support

1. Pla maker actions for all IK components and the Interaction S stem

### **Upgrade Guide**

#### 1. Backup your project before upgrading!

- 2. LimbIK IKRotation has been changed to match the orientation of the last bone like FBBIK effectorRotation. If ou are using LimbIK or BipedIK somewhere, ou will have to rotate the targets to match the exact desired rotations of the hand bones. This change will simplif setting up IK targets in the future (just cop the hand bone, pose it and use it as the target).
- 3. If ou have used BipedIK pelvis constraints, ou need to change bipedIK.solvers.pelvis.positionConstraint.position to bipedIK.solvers.pelvis.position. Same with positionWeight, positionOffset, rotation, rotationWeight and rotationOffset.
- 4. Integrated InteractionLookAt to IntegrationS stem to reduce the number of components. All used InteractionLookAt components need to be removed, Unit will give a warning if it finds an .
- 5. All InteractionObjects will need to specif PoserWeight curve or multiplier if ou wish to use HandPosers.
- 6. Restructured InteractionObject to an event based s stem. Some properties like triggerTime, releaseTime, the animations and message recipients will have to be reassigned for the events.

## Version 0.3 - 07.04.2014

## FullBodyBipedIK

- 1. Added OffsetEffector.cs and demo scene
- 2. Added Interaction Walls demo scene and script
- 3. Fixed FixTransforms bug that was causing some twitching on some unanimated rigs
- 4. Improved spine mapping performance and accurac . Not all spine bones need to be included in the spine references. It works the fastest if spine length is 2, first bone in the spine is the root node and the other is the last spine bone.
- 5. Improved solver weight blending. You can now weigh out the solver without dislocating the limbs even when the effectors are pinned
- 6. Improved the custom inspector and the validation of the biped references.

#### FABRIK

1. Improved solver stabilit under constraints.

#### LimblK

1. Animated bones can be skipped in the hierarch when assigning bones for LimblK and TrigonometricIK. The last bone will still be solved to the correct position.

#### Grounder

1. Added the GrounderFBBIK, GrounderBipedIK, GrounderIK and GrounderQuadruped components and the Grounder demo scene.

#### Common

- 1. Added OnPreInitiate, OnPostInitiate, OnPreUpdate and OnPostUpdate delegates to all IK solvers.
- 2. IK Component inspectors draw the scene view handles for disabled IK components
- 3. All IK components not will look up the hierarch to find the first Animation/Animator component to know if animatePh sics is on or off for the character.
- 4. Improved CameraController demo script

#### **Upgrade Guide**

1. Backup your project before upgrading!

## Version 0.22 - 13.03.2014

### FullBodyBipedIK

- 1. ShoulderRotator now works for characters that have animatePh sics enabled.
- Added BipedLimbOrientations. It is now ver eas to fix limb bending directions for UMA, 3ds Max and other skeleton t pes if necessar (ik.solver.SetLimbOrientations(BipedLimbOrientations.UMA);). Removed IKConstraintBend.SetBendDirection() and IKMappingLimb.SetBendDirection().
- 3. Switched FBBIK limbs from 1DOF joints to 3DOF joints. This does not enforce the limbs to behave like hinge joints an more and will allow for lossless solving and mapping of the limbs, meaning that if ou have FBBIK on with 0 effector weights, the animation will remain the same.
- 4. Removed IKConstraintBend.BendBone because it is not necessar an more after switching to 3DOF joints.
- 5. Restructured FBBIK chain structure to remove object composition c cle. This change is required for upgrading to Unit 4.6 (Beta).

#### AimIK

1. Added the Aim Swing demo scene.

#### **FABRIKRoot**

1. Restructured to remove object composition c cle. This change is required for upgrading to Unit 4.6 (Beta).

# **Upgrade Guide**

- 1. Backup your project before upgrading!
- 1. IKConstraintBend.BendBone was removed, if ou have an code using it, just delete it, will not be necessar an more.
- 2. FullBod BipedIK chain structure was restructured, so all used FBBIK components have to be reinitialied. Just right-click on the FBBIK coponent and select Reinitiate from the context menu. Pull and Reach values of the chains will reset to defaults.
- 3. FABRIKRoot was restructured and the chains have to be rebuilt in the inspector.

# Version 0.21 - 20.02.2014

1. Removed Button.cs, a relic testing script that was unused and not namespaced.

## Version 0.2 - 19.02.2014

### FullBodyBipedIK

- 1. Better scaling of the effector handles (for extra large/small characters)
- 2. Fixed a bend constraint bug that occured with ver tin characters
- 3. Added shortcuts to limb IK mappings (IKSolverFullBod Biped.leftArmMapping, IKSolverFullBod Biped.rightArmMapping, )
- 4. Added IKMappingLimb.weight for spherical interpolation of the limbs and for the possibilit of disabling the effect of IK for a limb.
- 5. Added reach smoothing modes (FBIKChain.reachSmoothing).
- 6. Added IKSolverFullBod Biped.GetLimbMapping(FullBod BipedEffector).
- 7. Added IKConstraintBend.SetBendDirection() and IKMappingLimb.SetBendDirection() to enable ou to change the bending direction of the limb.
- 8. Added Amplifier and a demo scene for it.
- 9. Added OffsetPose.Appl (IKSolverFullBod Biped solver, float weight, Quaternion rotation)
- 10. Fixes to Inertia deltaTime issues.
- 11. Removed IKEffector.Mode, ou can use IKEffector.maintainRelativePositionWeight now for smooth blending between the former MaintainAnimatedPosition and MaintainRelativePosition
- 12. Added OffsetModifier that will be the base abstract class for Inertia, Bod Tilt, Amplifier, EffectorOffset and all other FBBIK effector positionOffset modifiers in the future. OffsetModifier works with animatePh sics, uses delegates safel and makes it eas to appl limits to the offset. It will also make it easier for ou to create our custom offset modifiers, check out EffectorOffset.cs.
- 13. Added the TerrainOffset demo that was used to make the AimIK Redirecting Animation tutorial.
- 14. Fixed IKSolverLookAt.SetChain. The LookAt solver now works with no head and nulls can be passed to SetChain.
- 15. Added GenericPoser, which is similar to HandPoser, but enables ou to pose hierarchies that have a different number of bones.
- 16. Added the Interaction S stem and with it 3 demo scenes: Interaction, Interaction Character2Character and Interaction PickUp2Handed.

#### LookAtIK

1. Improved IKSolverLookAt. It now looks better with animations that have strong amplitude on the spine such as running and sprinting.

#### AimlK

1. RotationLimits can be used on the Aim Transform of AimIK now.

#### **Rotation Limits**

1. Fixed RotationLimitAngle twist limit when swing limit is 0.

#### Common

- 1. Added V3Tools to help dealing with vector algebra.
- 2. Added Fix Transforms option to all the IK components. Its now possible to use FBBIK and BipedIK with no Animation/Animator component. With Fix Transforms set to true, there will be more issues with unanimated bones.
- 3. Clamped all solver weights to 0-1.

#### **Documentation**

- 1. Updated User Manual and Script Reference to 0.2
- 2. Added diagrams to the Script Reference

## **Upgrade Guide**

- 1. Backup your project before upgrading!
- 2. The new Fix Transforms option for IK components will be defaulted to true. You can turn it off for a small performance gain on solvers ou don't need it for. It will also make an unanimated IK chain reset to it's initial pose in each Update before solving, so if ou need additive solving of our CCD/FABRIK/FABRIKRoot chains, turn it off.
- 3. IKEffector.Mode was changed to IKEffector.maintainRelativePositionWeight, so if ou used MaintainRelativePosition an where, ou will have to change it to effector.maintainRelativePositionWeight = 1.
- 4. Changes to Bod Tilt behaviour, ou ma need to adjust the OffsetPoses for tilting.

BETA (0.1) - 15.01.2014

Initial Release
